PINAAI

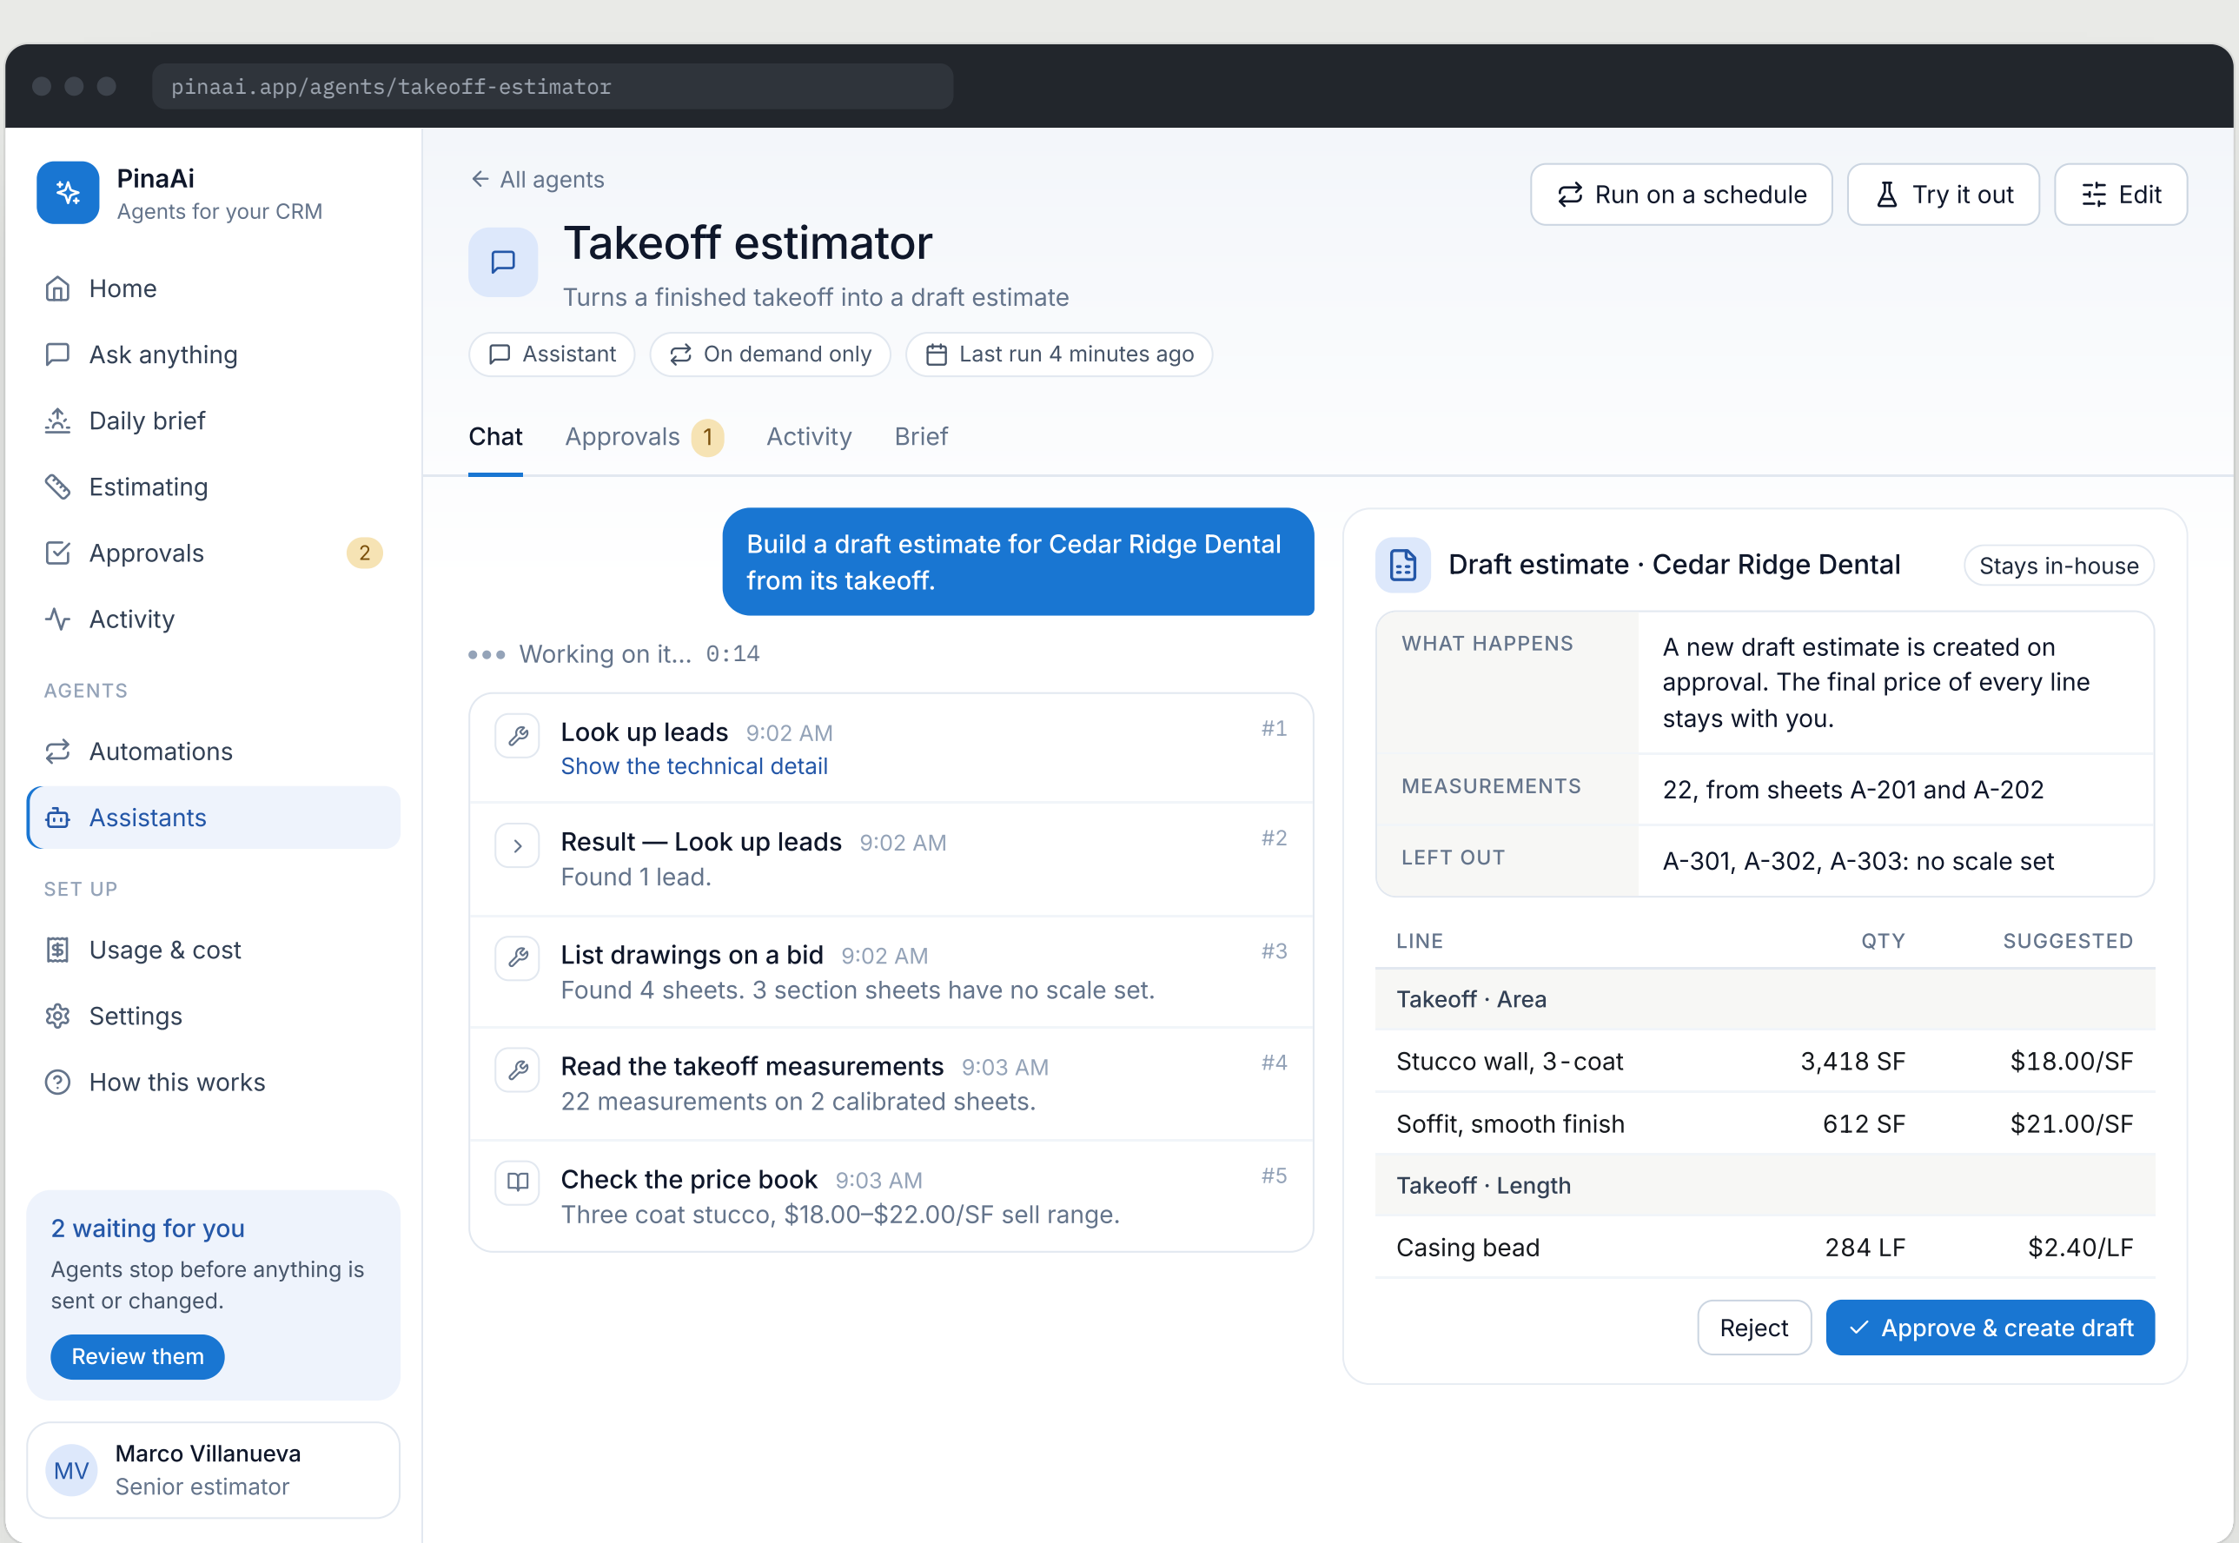
PRODUCT CASE STUDY · NOV 2026

AGENTS FOR YOUR CRM

PinaAi
Agents that stop and ask.

AI agents that read the CRM, prepare the work, and wait. Nothing is sent or changed until a person says yes.

FOR	Pina Realty and AP Plastering, on the same logins as the CRM
FIRST AGENT	Takeoff estimator: turns a finished takeoff into a draft estimate
STATUS	Built and walked through in demo mode. AI is switched off until the team turns it on.



2 waiting for you
Agents stop before anything is sent or changed.

Marco Villanueva
Senior estimator

Takeoff estimator
Turns a finished takeoff into a draft estimate

Build a draft estimate for Cedar Ridge Dental from its takeoff.

Working on it... 0:14

- Look up leads 9:02 AM #1 — Show the technical detail
- Result — Look up leads 9:02 AM #2 — Found 1 lead.
- List drawings on a bid 9:02 AM #3 — Found 4 sheets. 3 section sheets have no scale set.
- Read the takeoff measurements 9:03 AM #4 — 22 measurements on 2 calibrated sheets.
- Check the price book 9:03 AM #5 — Three coat stucco, $18.00–$22.00/SF sell range.

Draft estimate · Cedar Ridge Dental

WHAT HAPPENS	A new draft estimate is created on approval. The final price of every line stays with you.
MEASUREMENTS	22, from sheets A-201 and A-202
LEFT OUT	A-301, A-302, A-303: no scale set

LINE	QTY	SUGGESTED
Takeoff · Area		
Stucco wall, 3-coat	3,418 SF	$18.00/SF
Soffit, smooth finish	612 SF	$21.00/SF
Takeoff · Length		
Casing bead	284 LF	$2.40/LF

THE PROBLEM · WHO IT'S FOR

Estimators spend their day re-typing what's already in the CRM.

The CRM already holds the whole estimating machine: calibrated drawings, measured markups, assemblies, a price book and estimates. Turning a finished takeoff into a draft estimate is still copy-and-paste work, and so are the follow-up emails, the deadline checks and the morning catch-up.

An assistant could do that prep. But an AI that can email clients or change a live bid is a risk no contractor should take on trust. One confidently wrong square footage can lose a job.

PinaAi is built around that worry. Agents read freely and do the preparation. Anything that would send, change or create something becomes a card that waits for a person.

Estimators	Get a draft estimate from their own takeoff, with every gap called out.
Sales & acquisition	Get first replies, follow-ups and a daily brief drafted for them.
Owners	Decide what each agent may see, cap the monthly spend and see every run.
New users	Have a two-minute "How this works" page and buttons that say exactly what they do.

RULE 1

Reading is free. Doing needs a yes.

Agents look things up on their own. Every email, note or estimate they prepare waits in Approvals.

RULE 2

The agent never measures.

Quantities only come from takeoff markups a person drew on a sheet a person calibrated. A sheet with no scale is reported, not guessed.

RULE 3

The price stays with you.

Rates are suggested from the company price book. Approving never overwrites a price an estimator already set.

KEY FEATURES

Six screens, one promise.

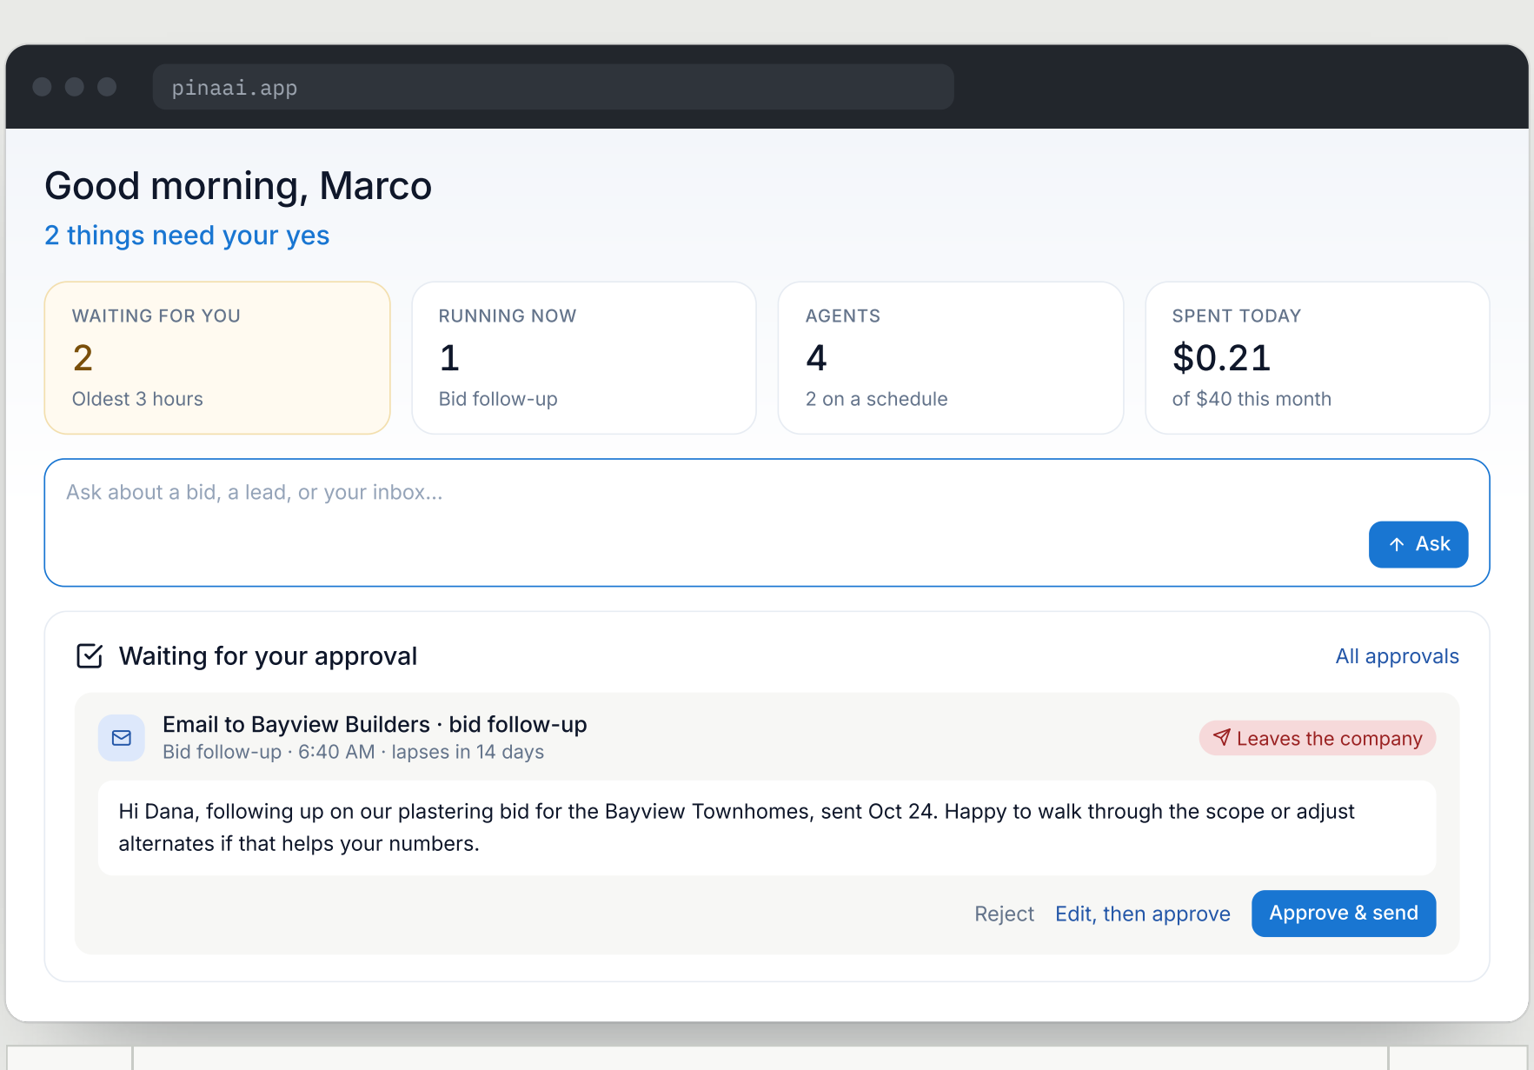
Each screen below is redrawn from the app with sample data. Agents run on the server, so closing the tab doesn't stop a run.

HOME

What's waiting for you comes first.

Four numbers, a box to ask a question, the approvals waiting and what ran recently. The approval cards are full previews, so you can read the actual email from the home screen.

- **Waiting for you** is the number that reads first
- **Spent today** sits beside it, in dollars
- **Recent activity** links every answer to its run



Good morning, Marco
2 things need your yes

WAITING FOR YOU	RUNNING NOW	AGENTS	SPENT TODAY
2	1	4	$0.21
Oldest 3 hours	Bid follow-up	2 on a schedule	of $40 this month

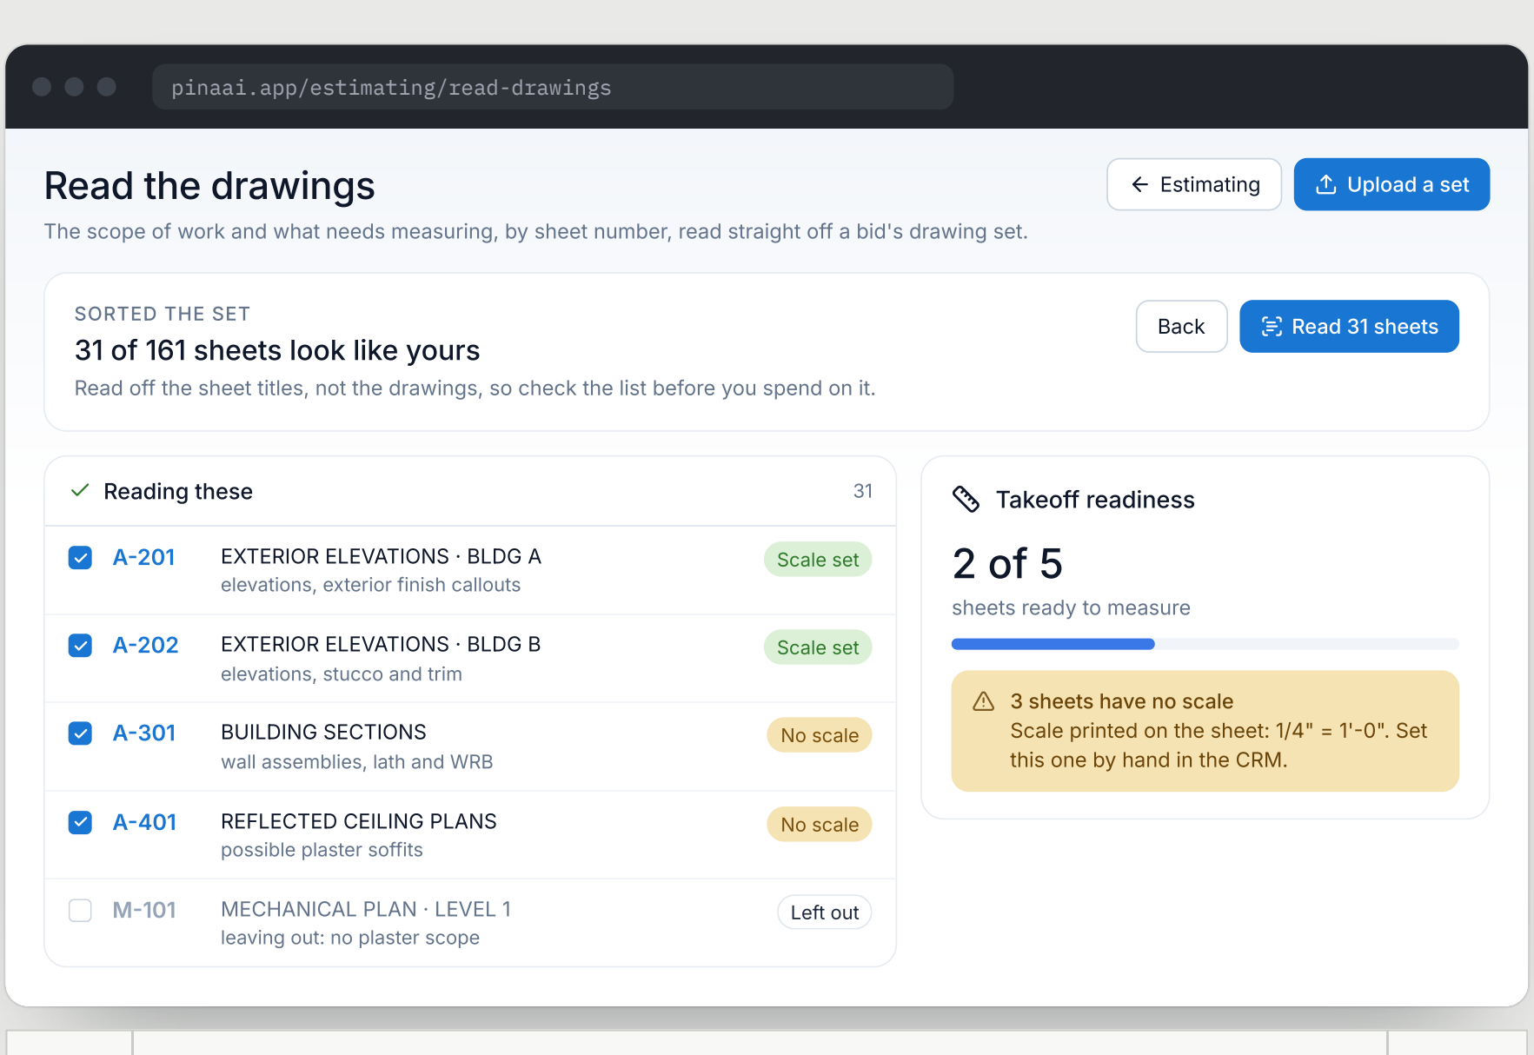
Ask about a bid, a lead, or your inbox...

Waiting for your approval

Email to Bayview Builders · bid follow-up
Bid follow-up · 6:40 AM · lapses in 14 days

Hi Dana, following up on our plastering bid for the Bayview Townhomes, sent Oct 24. Happy to walk through the scope or adjust alternates if that helps your numbers.

Fig. 2 Home, with an email that leaves the company held for a person Desktop



Read the drawings
The scope of work and what needs measuring, by sheet number, read straight off a bid's drawing set.

SORTED THE SET
31 of 161 sheets look like yours
Read off the sheet titles, not the drawings, so check the list before you spend on it.

Reading these 31

- ☑ A-201 EXTERIOR ELEVATIONS · BLDG A — elevations, exterior finish callouts
- ☑ A-202 EXTERIOR ELEVATIONS · BLDG B — elevations, stucco and trim
- ☑ A-301 BUILDING SECTIONS — wall assemblies, lath and WRB
- ☑ A-401 REFLECTED CEILING PLANS — possible plaster soffits
- ☐ M-101 MECHANICAL PLAN · LEVEL 1 — leaving out: no plaster scope

Takeoff readiness
2 of 5
sheets ready to measure

3 sheets have no scale
Scale printed on the sheet: 1/4" = 1'-0". Set this one by hand in the CRM.

Fig. 3 Sheet triage and takeoff readiness on a sample set Desktop

READ THE DRAWINGS

Sort a 161-sheet set before anyone opens it.

Upload a bid's drawing set and PinaAi sorts it by the sheet titles: which sheets look like plaster work, which to leave out, and why. You check the list before any reading is paid for.

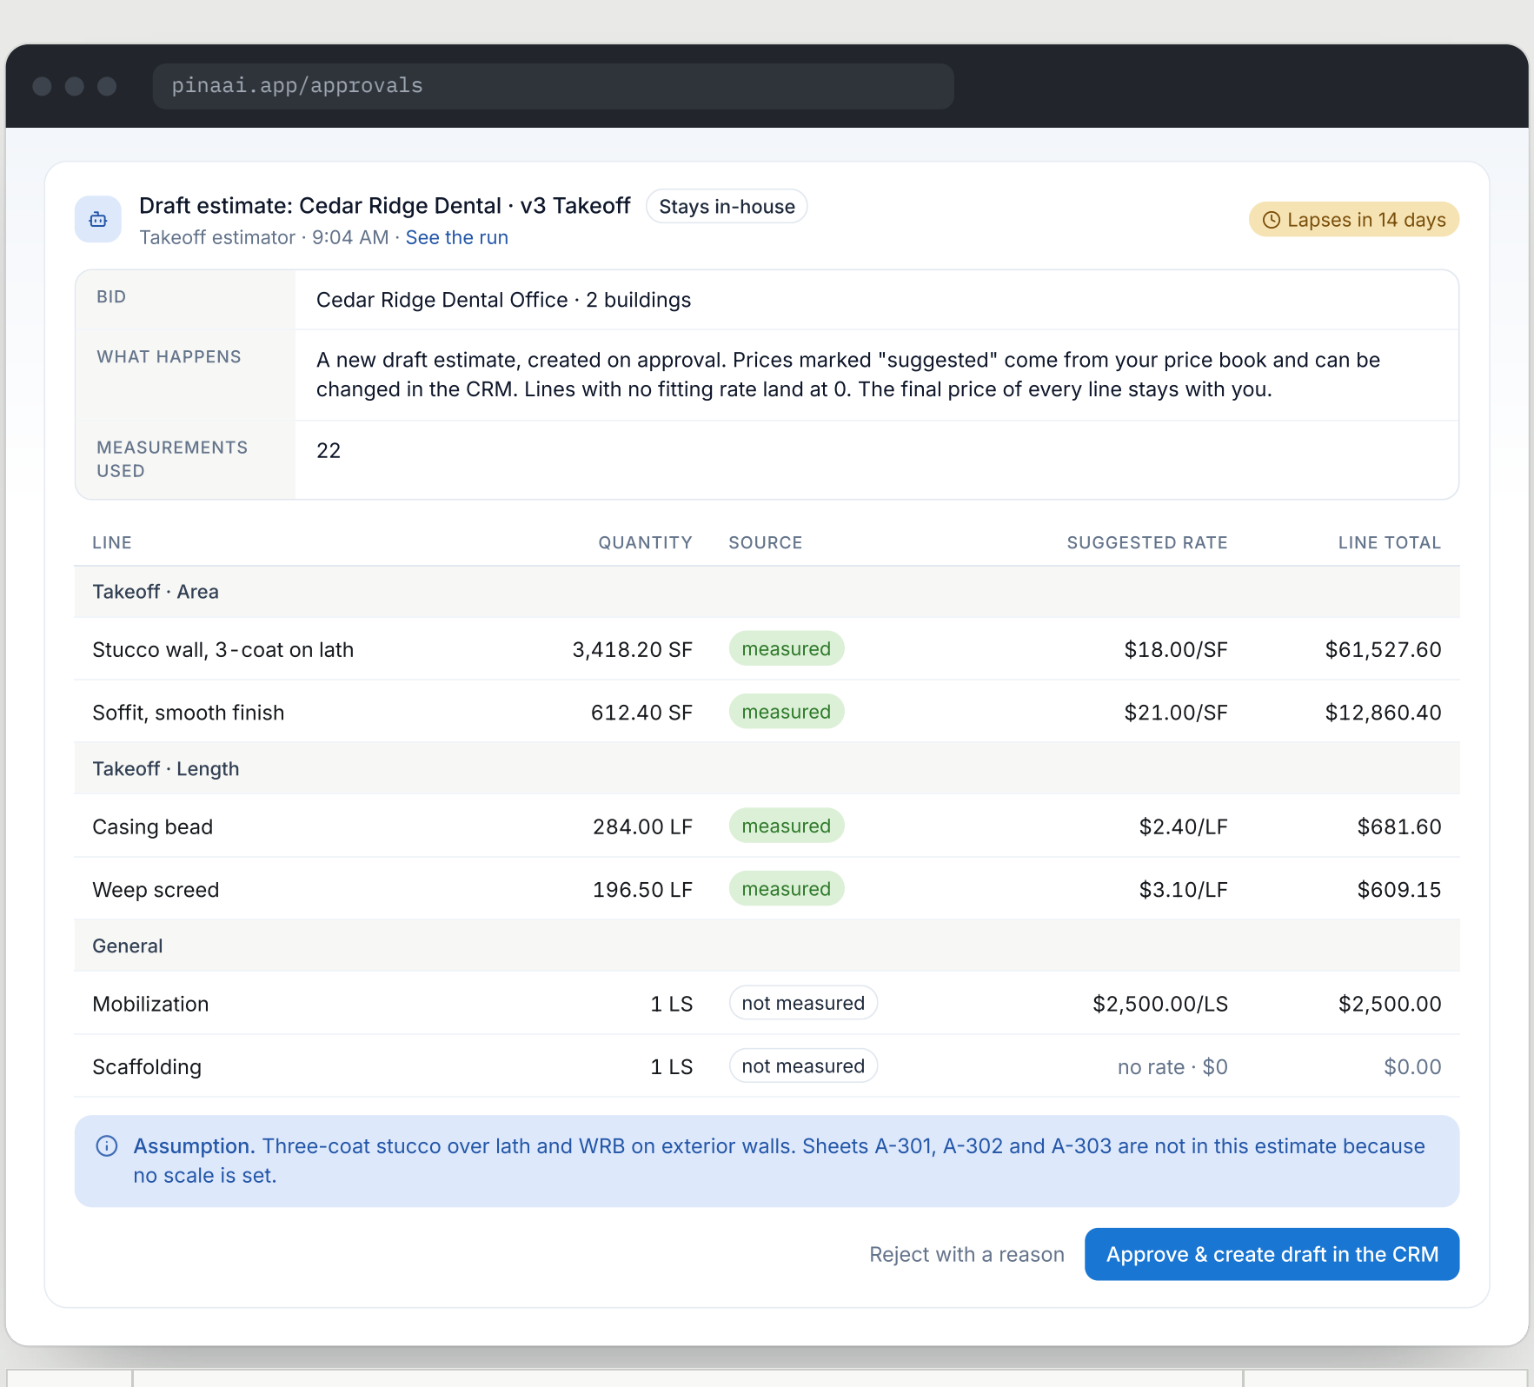
- **Scope report**: the scope of work and what to measure, with page numbers
- **Takeoff readiness** flags sheets with no scale set
- **Nothing is deleted**: left-out sheets stay on the bid

TAKEOFF ESTIMATOR

A draft estimate, grouped the way an estimator reads it.

The estimator agent reads the takeoff a person measured, applies the same assemblies and waste factors as the CRM, and proposes lines. Approving it writes a draft estimate into the CRM's own estimate tables.

- **Every line says where it came from**: measured, or not measured and why
- **Stale check**: if a measurement moves before approval, the approval fails loudly
- **Assumptions** written out for the estimator to confirm



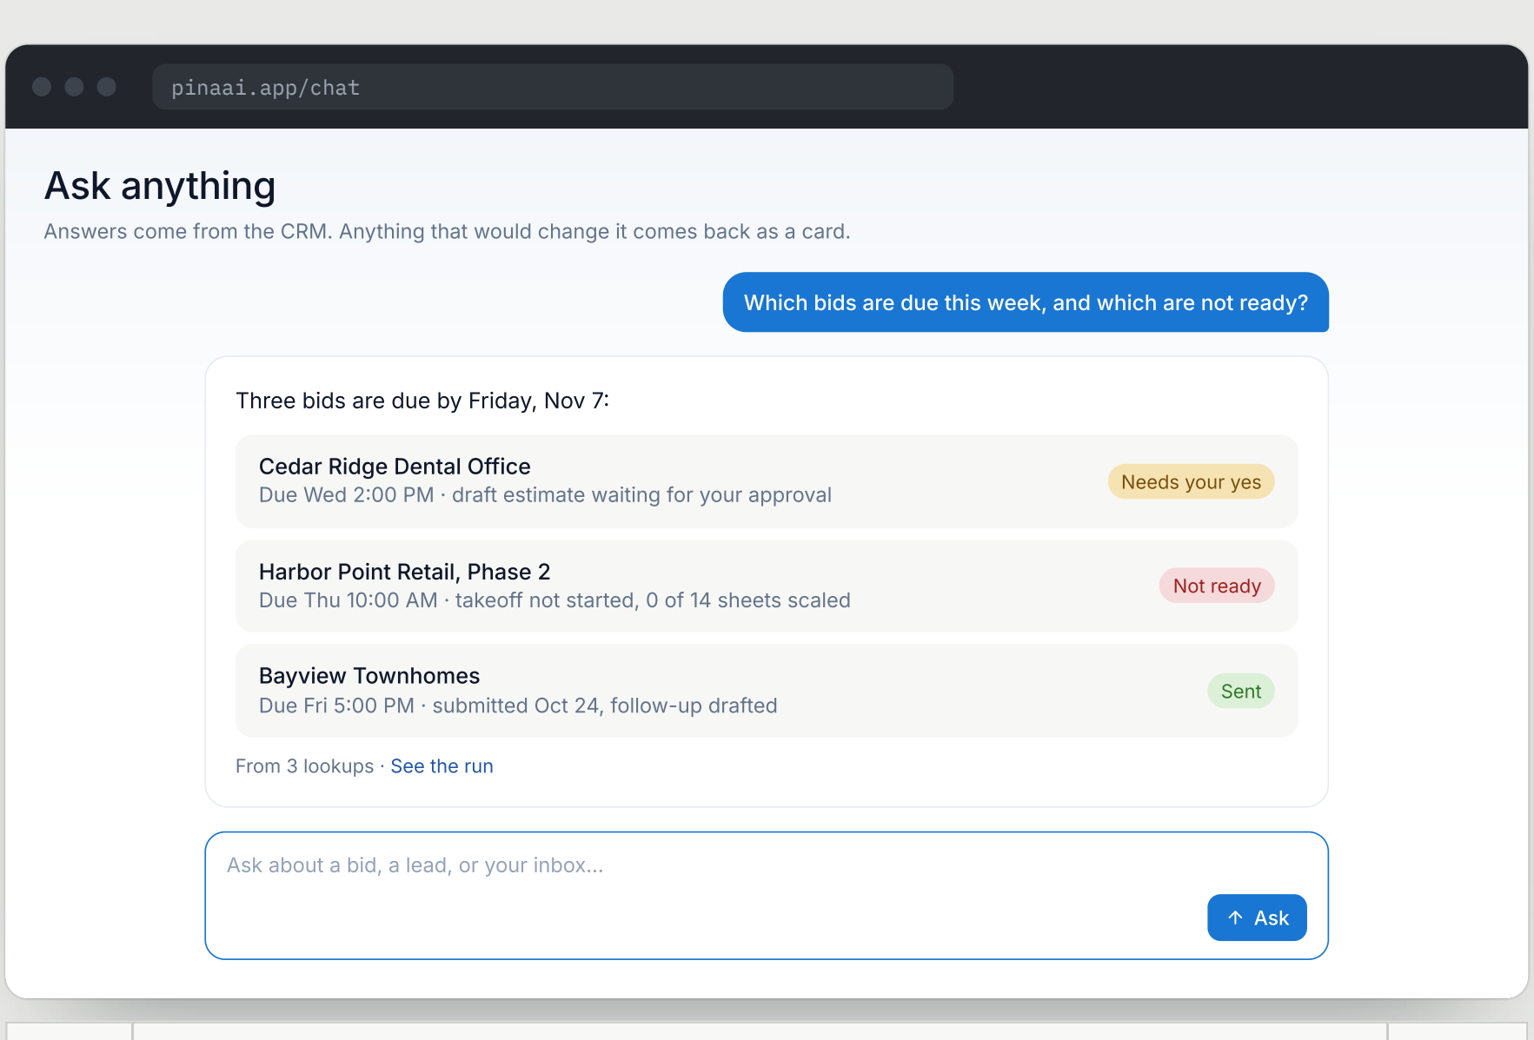
Draft estimate: Cedar Ridge Dental · v3 Takeoff
Takeoff estimator · 9:04 AM · See the run

BID	Cedar Ridge Dental Office · 2 buildings
WHAT HAPPENS	A new draft estimate, created on approval. Prices marked "suggested" come from your price book and can be changed in the CRM. Lines with no fitting rate land at 0. The final price of every line stays with you.
MEASUREMENTS USED	22

LINE	QUANTITY	SOURCE	SUGGESTED RATE	LINE TOTAL
Takeoff · Area				
Stucco wall, 3-coat on lath	3,418.20 SF	measured	$18.00/SF	$61,527.60
Soffit, smooth finish	612.40 SF	measured	$21.00/SF	$12,860.40
Takeoff · Length				
Casing bead	284.00 LF	measured	$2.40/LF	$681.60
Weep screed	196.50 LF	measured	$3.10/LF	$609.15
General				
Mobilization	1 LS	not measured	$2,500.00/LS	$2,500.00
Scaffolding	1 LS	not measured	no rate · $0	$0.00

Assumption. Three-coat stucco over lath and WRB on exterior walls. Sheets A-301, A-302 and A-303 are not in this estimate because no scale is set.

Fig. 4 Draft estimate approval card Units SF · LF · LS



Ask anything
Answers come from the CRM. Anything that would change it comes back as a card.

Which bids are due this week, and which are not ready?

Three bids are due by Friday, Nov 7:

- Cedar Ridge Dental Office — Due Wed 2:00 PM · draft estimate waiting for your approval
- Harbor Point Retail, Phase 2 — Due Thu 10:00 AM · takeoff not started, 0 of 14 sheets scaled
- Bayview Townhomes — Due Fri 5:00 PM · submitted Oct 24, follow-up drafted

From 3 lookups · See the run

Ask about a bid, a lead, or your inbox...

Fig. 5 A read-only answer in chat Desktop

ASK ANYTHING

Ask a question, get an answer or a card.

Chat runs a real agent on the server. A question gets a read-only answer. A request to draft something puts an approval card right inside the conversation. If a run fails, it says why in plain English and does not invent an answer.

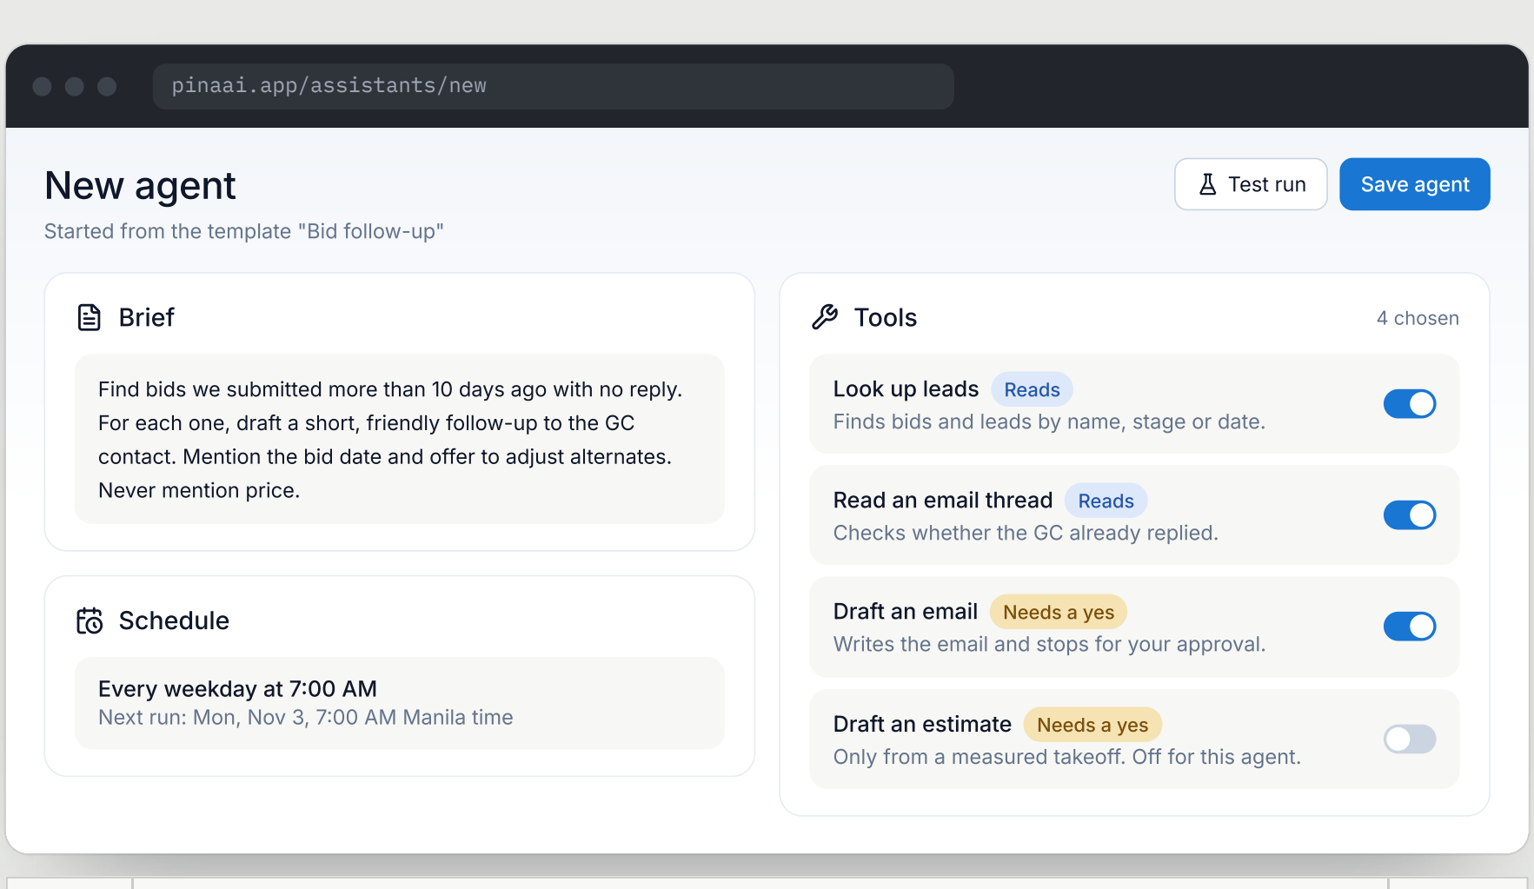
- **Answers cite the runs** behind them
- **Drafts arrive as cards**, never as sent mail

AGENT WORKSHOP

Build an agent from a brief, then rehearse it.

An agent is a written brief, a list of tools and the parts of the CRM it may reach. Six ready-made templates open as editable drafts. A test run does everything a real run does except queue anything.

- **Tools explained in one human sentence**, not the model's instructions
- **Schedules in plain English** with the next run in Manila time
- **Scopes** can only narrow what the owner can already see



New agent
Started from the template "Bid follow-up"

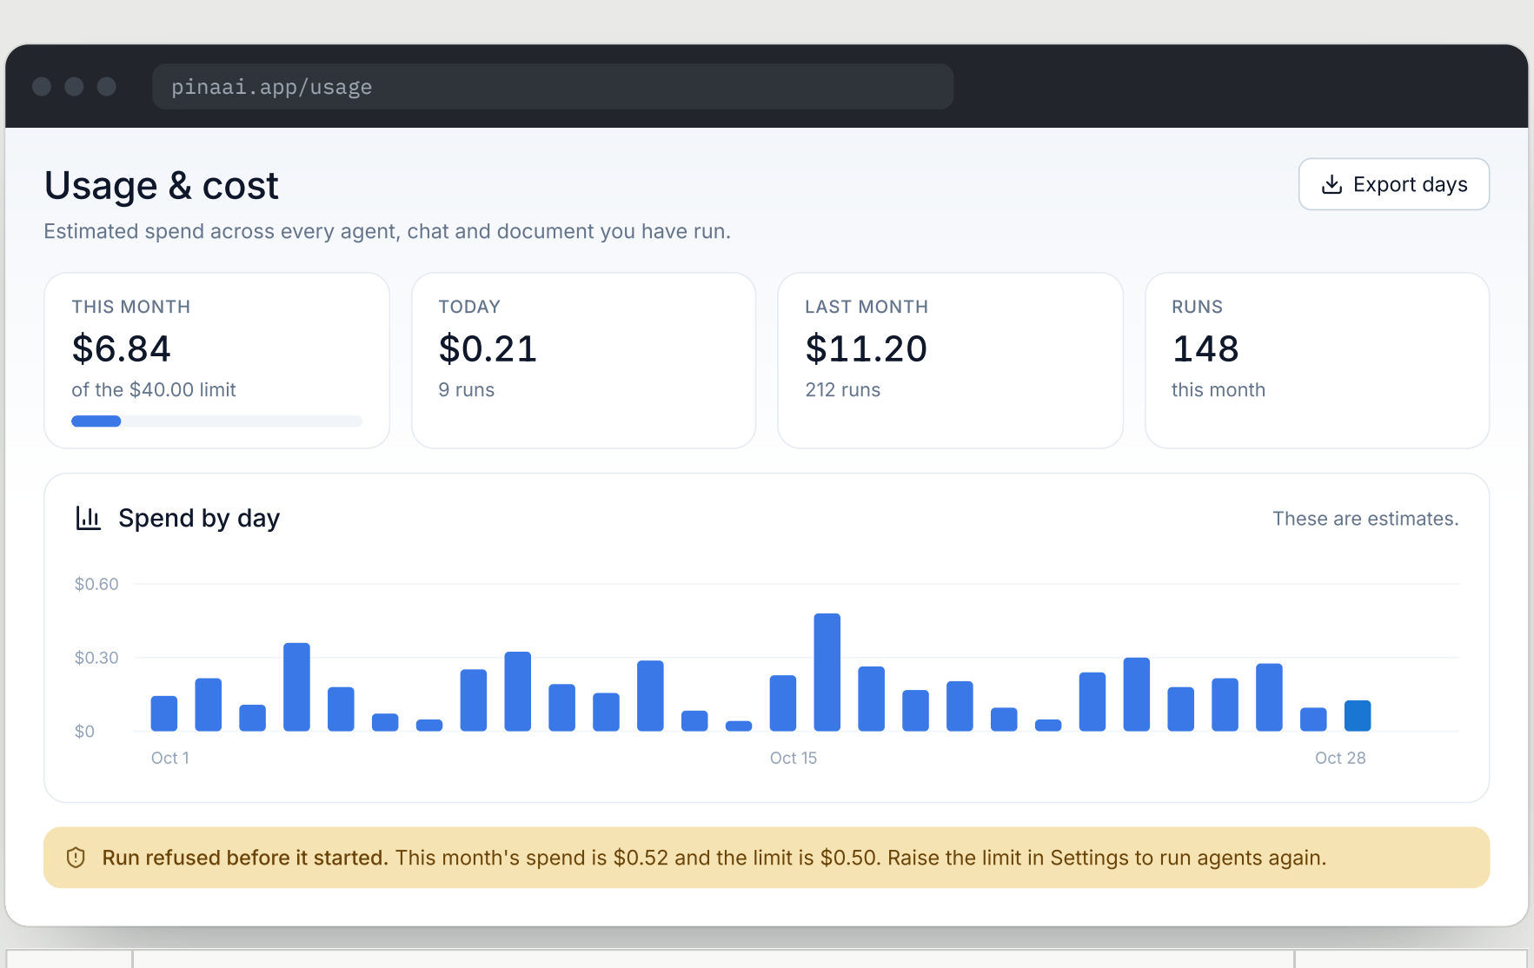
Brief
Find bids we submitted more than 10 days ago with no reply. For each one, draft a short, friendly follow-up to the GC contact. Mention the bid date and offer to adjust alternates. Never mention price.

Schedule
Every weekday at 7:00 AM
Next run: Mon, Nov 3, 7:00 AM Manila time

Tools 4 chosen

- Look up leads — Finds bids and leads by name, stage or date.
- Read an email thread — Checks whether the GC already replied.
- Draft an email — Writes the email and stops for your approval.
- Draft an estimate — Only from a measured takeoff. Off for this agent.

Fig. 6 The workshop, building a follow-up agent from a template Desktop



Usage & cost
Estimated spend across every agent, chat and document you have run.

THIS MONTH	TODAY	LAST MONTH	RUNS
$6.84	$0.21	$11.20	148
of the $40.00 limit	9 runs	212 runs	this month

Run refused before it started. This month's spend is $0.52 and the limit is $0.50. Raise the limit in Settings to run agents again.

Fig. 7 Usage, with the spend limit refusing a run USD, estimated

USAGE & COST

Every cent counted, with a hard limit.

Usage shows this month, today and last month, a daily chart and cost per agent. The owner sets a monthly limit. Once it's reached, a run is refused before it starts, with the amount and the limit in the message.

- **A kill switch** keeps the model off until the team turns it on
- **CSV export** by day, agent or person

Also in the app: a Daily brief written each morning, a Comp Playbook where an investor analyst keeps its comp rules in plain words, Activity with every run and its steps, and the "How this works" page.

THE USER FLOW

From a drawing set to a draft estimate in the CRM.

People do the measuring and the pricing. The agent does the reading and the paperwork in between. Each step says who does it.

STEP 1

Upload the set

Pick the bid and upload its drawing set.

Estimator

STEP 2

Sort the sheets

PinaAi sorts the set by title and flags the sheets with no scale.

Agent, then a check by the estimator

STEP 3

Measure

The estimator calibrates and measures in the CRM's takeoff workspace.

Estimator, in the CRM

STEP 4

Run the estimator

The agent reads the takeoff and the price book and drafts the lines.

Agent

STEP 5

Review the card

Approve, edit, or reject with a reason the agent reads next time.

Waits for a person

STEP 6

Price and send

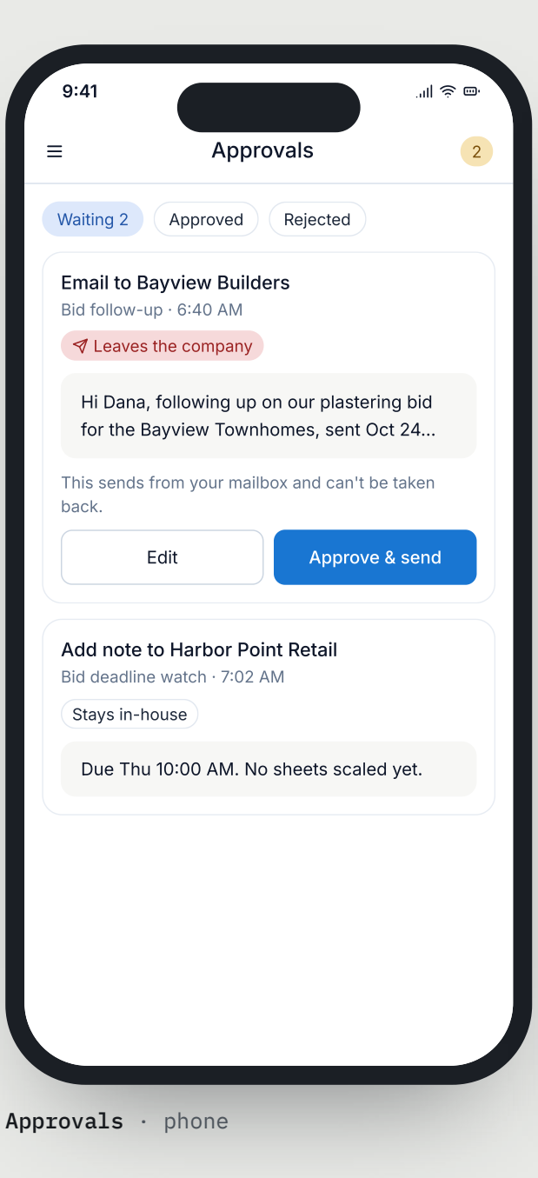
The draft lands in the CRM estimate. The estimator sets final prices.

Estimator, in the CRM

SCREENS

Approve from your phone.

At phone width the sidebar folds into a menu, tables scroll inside their own box and every button stays 44px tall.



Email to Bayview Builders
Bid follow-up · 6:40 AM

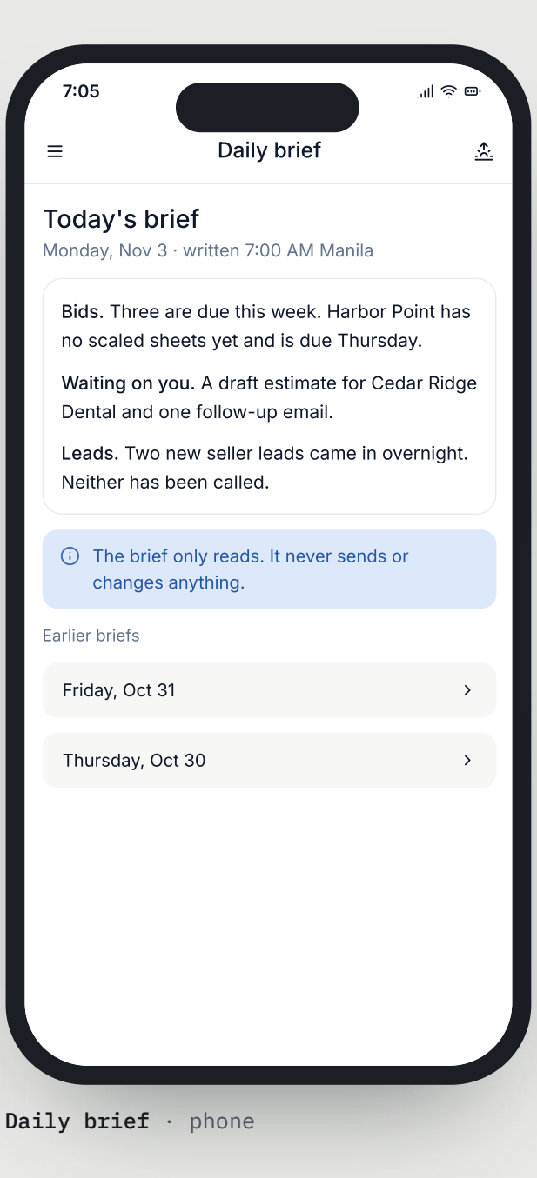
Hi Dana, following up on our plastering bid for the Bayview Townhomes, sent Oct 24...

This sends from your mailbox and can't be taken back.

Add note to Harbor Point Retail
Bid deadline watch · 7:02 AM

Due Thu 10:00 AM. No sheets scaled yet.

Approvals · phone



Today's brief
Monday, Nov 3 · written 7:00 AM Manila

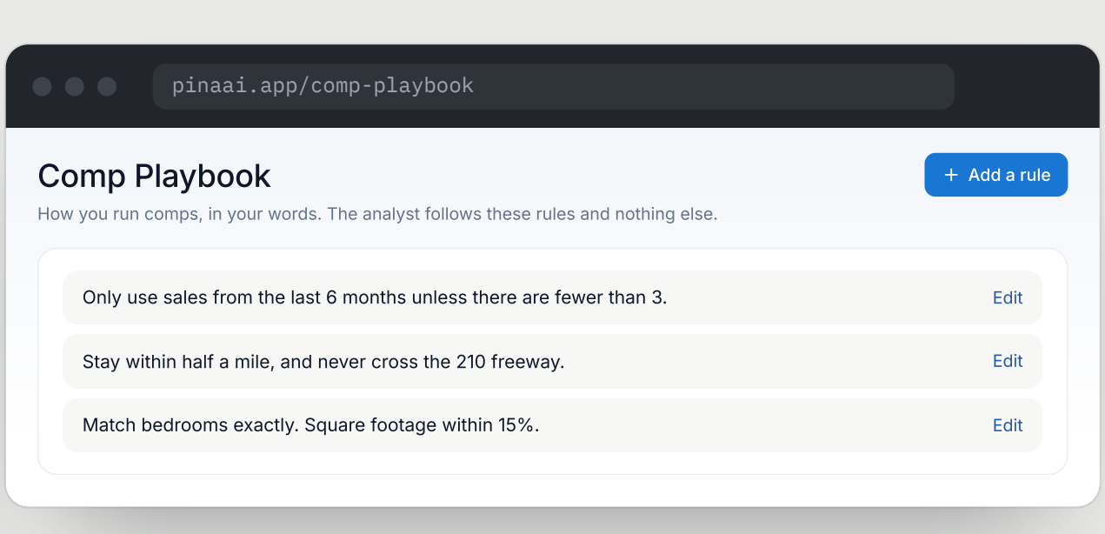
Bids. Three are due this week. Harbor Point has no scaled sheets yet and is due Thursday.

Waiting on you. A draft estimate for Cedar Ridge Dental and one follow-up email.

Leads. Two new seller leads came in overnight. Neither has been called.

The brief only reads. It never sends or changes anything.

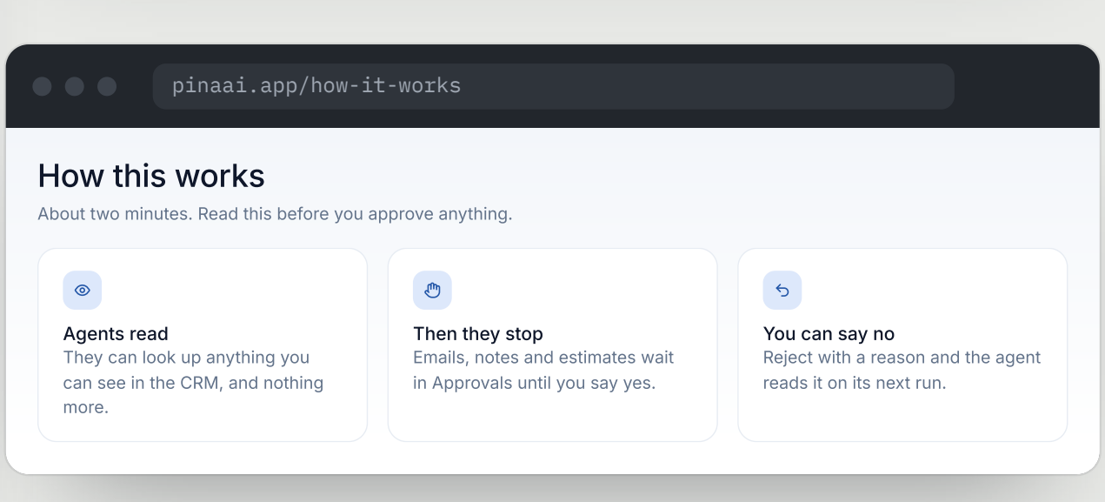
Daily brief · phone



Comp Playbook
How you run comps, in your words. The analyst follows these rules and nothing else.

- Only use sales from the last 6 months unless there are fewer than 3.
- Stay within half a mile, and never cross the 210 freeway.
- Match bedrooms exactly. Square footage within 15%.

Comp Playbook · rules for the investor deal analyst



How this works
About two minutes. Read this before you approve anything.

Agents read — They can look up anything you can see in the CRM, and nothing more.

Then they stop — Emails, notes and estimates wait in Approvals until you say yes.

You can say no — Reject with a reason and the agent reads it on its next run.

How this works · the plain-English explainer

UI KIT IN CONTEXT

The CRM's kit, plus a vocabulary for trust.

PinaAi uses the same workspace kit as the CRM, so it feels like part of it. What it adds is a set of states and words that make it clear what an agent did and what it is asking for.

Colour

One blue for action. Amber always means "waiting for a person". Red marks anything that leaves the company.

Primary	Link ink	Waiting	Leaves company	Inset row	Page wash
#1976D2	#2457A8	#F6E3B4	#F6D9DA	#F7F7F5	#F3F6FA

Needs your yes · Leaves the company · Stays in-house · Reads · measured · ✓ Succeeded · Failed

Words

Jargon is deleted before it's explained. Buttons say exactly what will happen.

~~Approve~~	Approve & send
~~Trigger~~	Started by
~~manual~~	You pressed Run
~~Payload~~	The technical detail
~~Dry run~~	Try it out
~~Tool description~~	One human sentence per tool

Components, as they appear on screen

Inter throughout, nothing heavier than medium weight, no shadows on content. Quantities use tabular figures.

Run step 9:02 AM #1 — Show the technical detail

Result 9:02 AM #2 — Found 1 lead.

2 waiting for you
Agents stop before anything is sent or changed.
Review them

WHAT HAPPENS	A new draft estimate, on approval.

Approve & send · Try it out

WHAT'S NEXT

Start with one agent, prove it, then widen.

The plan is to switch on the takeoff estimator first and run it alongside an estimator on live bids before anyone relies on it.

NEXT

Go live with one agent

Apply the schema from the CRM, switch the model on, and run the takeoff estimator next to a person on real bids.

AFTER THAT

Mail and documents

Connect email, files and calendar through the CRM's existing Microsoft sign-in.

PLANNED

Lead tools

One-button jobs for leads, built the same way as the estimating tools, with every change queued for approval.

PLANNED

Team view

Let managers see their team's agents and runs, using the same rules as the CRM.
