

# Dale Bedania

Full-stack developer · Pampanga, Philippines · works with clients in PH & Australia

I build the **web apps, CRMs and AI tools** businesses run on — software that fits how your team already works, numbers you can trust, and clear updates from the first call to launch.

**25+**

products shipped

## 01 when to bring me in

→ Your team runs on spreadsheets and it's starting to break.

→ You want AI working on your real business data, with a human approving every action.

→ You need a custom CRM, portal or dashboard, not another off-the-shelf tool.

→ You need one developer who owns design, build and launch, and talks to you directly.

## 02 what i do

### Custom web apps

End-to-end builds with clean, scalable architecture.

### CRMs & business systems

Portals, dashboards and role-based tools that replace spreadsheets.

### AI integrations

LLM features and agents wired into your data, with approval gates.

### Mobile apps

Cross-platform iOS & Android with offline support.

### UX / UI design

Designed in Figma, built to the pixel.

### Hosting & support

Deployment, domains, SSL and maintenance after launch.

## 03 selected work

### Pina Management CRM + PinaAi · Pina Realty Management

Real estate · React · Supabase · Gemini AI

|         |                                                                                                                                                                      |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| problem | Listings, clients and deals lived in spreadsheets and disconnected tools. Getting an answer meant clicking through records one by one.                               |
| built   | A custom CRM, then an AI layer on top: ask questions in plain language, get a daily brief, run estimates, and let agents handle follow-ups behind an approval queue. |
| result  | <b>One source of truth for the whole office. Every AI action is approved by a person and traceable, including what it cost.</b>                                      |

### HAU IDMO Employee Portal · Holy Angel University

Education · Laravel · MySQL · live

|         |                                                                                                                       |
|---------|-----------------------------------------------------------------------------------------------------------------------|
| problem | HR records and requests ran on manual, document-heavy processes that were slow to search and easy to duplicate.       |
| built   | A role-based employee portal for HR staff and employees, designed for non-technical users and deployed to production. |
| result  | <b>Employee information searchable in seconds. Earned Most Outstanding On-the-Job Trainee. hau-oie-idmo.com</b>       |

### CVL Content Generator · Complete Vitality Life

Health · React · Supabase

|         |                                                                                                                                   |
|---------|-----------------------------------------------------------------------------------------------------------------------------------|
| problem | A 30-post batch meant ~200 Instagram slides laid out one by one in Canva, then hand-exported and hand-named.                      |
| built   | A browser-based studio: upload one Excel file, pick from 91 on-brand templates, export, and share a live review link.             |
| result  | <b>Manual layout became upload, pick, export, with the posting schedule produced automatically. Runs on a free-tier database.</b> |

problem

Installers quoted from spreadsheets nobody fully trusted, and discounts had no record of who approved them.

built

A quoting tool with Excel-accurate pricing, a manager approval flow for discounts, and five PDFs from one record.

result

Every figure shows the formula behind it (106 traced figures), and 27 automated tests lock the pricing rules in place.

problem

A medical-grade product needs a site that earns trust the moment someone lands on it.

built

Brand site designed and built end-to-end, adapting when the client changed direction mid-project.

result

"The site ended up looking like the brand we had in our heads." — Founder. thezepatide.com

Also: SPUR sports app (React Native), Kayantabe volunteer platform, Umbra tutoring marketplace, IMMFI. All 20 projects at bedaniadale.vercel.app.

04 what clients say

“Working with Dale was genuinely a joy. He took the time to understand exactly what our business needed, explained the technical side in a way I could follow, and kept me in the loop at every step.”

Gabriela Pina · Owner, Pina Realty Management

“We sell a medical-grade product, so the site had to earn trust the moment someone landed on it. Dale understood that from our first call. He designed it, built it and set up everything behind it.”

Michael Paul David Lusung · Founder, The Zepatide

“He explained things without the jargon, sent updates before we had to ask, and was honest when something would take longer than we hoped. I'd work with him again without thinking twice.”

Queenie Eliza Cortez · Co-founder, The Zepatide

“One of the most reliable collaborators I've worked with. He communicates clearly, hits his deadlines, and is open to feedback without ever getting defensive.”

Diego Reyes · Owner, CompleteVitalityLife

“Talented, dependable, and so pleasant to work with. He delivered exactly what we agreed on and then went the extra mile to make it better.”

Regine Lahoy · Direct client, Australia

05 how we'd work together

01

Discovery call

Your goals, users and how the team works today.

02

Scope & quote

Clear features, timeline and price before any build.

03

Design

Screens in Figma you approve first.

04

Build

Regular updates and demos, unprompted.

05

Launch & support

Deployment, handover and maintenance.

06 tools i build with

Web:

React, Next.js, TypeScript, JavaScript, Tailwind CSS, Node.js, Laravel, PHP

Mobile:

React Native, Flutter

Payments & services:

Stripe, Twilio, WordPress, Shopify

Design:

Figma, Photoshop, Illustrator, Canva

Data:

Supabase, PostgreSQL, MySQL, Firebase

AI & automation:

Google Gemini, Claude, ChatGPT, Zapier, n8n

Hosting:

Vercel, Netlify, Cloudflare Pages, AWS, Hostinger

07 background

- **BS Information Technology, Web Development** — Holy Angel University, 2025. Most Outstanding Graduating Student; Most Outstanding On-the-Job Trainee; Dean's & President's Lister; HAFRD Scholar; Code Geeks President.
- Certified: Red Hat System Administrator · Cisco CCNA Cyber Ops · Google Analytics · HubSpot SEO I & II
